PROFESSIONAL SUMMARY

High-impact Full-Stack Software Engineer with demonstrated experience architecting event-driven web applications, real-time telemetry dashboards, and microservices-backed RESTful APIs. Specialized in JavaScript (ES6+), Python, React, Node.js, and PostgreSQL, with a proven track record of engineering scalable software solutions and competing in national technical hackathons.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), Python, SQL (PostgreSQL), HTML5, CSS3, Java, C
- **Frontend Development:** React.js, Tailwind CSS, Component-Driven Architecture, Responsive UI/UX, State Management
- **Backend & API Architecture:** Node.js, Express.js, RESTful Microservices, Middleware & Payload Validation
- **Databases & Cloud Infrastructure:** PostgreSQL, Supabase, Azure Blob Storage, Relational Schema Design, Row-Level Security (RLS)
- **Developer Tools & Practices:** Git, GitHub, Linux CLI, Postman, Vercel Deployment, Figma, Power Apps

TECHNICAL PROJECTS

LandGuard — Real-Time Landslide Risk Monitoring Platform

React.js, JavaScript (ES6+), Python, Node.js, GeoJSON, RESTful APIs, Tailwind CSS

- Architected an event-driven telemetry dashboard deploying React and GeoJSON to visualize live multi-sensor geospatial environmental data across 100+ terrain coordinates.
- Engineered dynamic client-side state streaming handlers in Node.js and Python, reducing data updates processing latency by 35%.
- Implemented an automated threshold evaluation engine processing incoming data streams in real-time to execute proactive visual warning alerts with 99.8% detection reliability.

VitalNexus (PulseRoute) — Dynamic Emergency Healthcare Routing Engine

Node.js, Express.js, React.js, RESTful APIs, Algorithmic Routing, Figma

- Designed a multi-variable emergency dispatch engine in Node.js calculating optimal transit corridors by weighting real-time traffic telemetry against ICU hospital capacity.
- Engineered decoupled RESTful microservices and input validation schemas maintaining sub-200ms API response times under high simulated concurrent request loads.
- Formulated an interactive React dispatch dashboard and end-to-end system architecture evaluated by expert industry panels at national technical summits.

Medi-Guide — Full-Stack Healthcare Clinic Portal

React.js, Node.js, Express.js, PostgreSQL, Supabase, RESTful APIs, Git

- Developed an end-to-end medical intake platform streamlining structured patient symptom-logging workflows and secure electronic health record indexing.
- Architected normalized PostgreSQL schemas on Supabase with foreign keys, compound indexes, and Row-Level Security (RLS) policies ensuring 100% data isolation.
- Built secure RESTful CRUD API endpoints utilizing Express validation middleware to isolate business logic and ensure strict payload sanitization.

HACKATHONS & COMPETITIVE ACHIEVEMENTS

- **Smart India Hackathon (SIH) 2026:** Lead Prototype Developer for LandGuard; engineered real-time telemetry dashboard architecture and automated risk alert pipeline.
  UIET Kurukshetra E-Summit 2026: Technical Finalist for VitalNexus; presented multi-variable triage dispatch algorithms and system architecture to evaluation jury.
- **Spark Hack 2026 (Sanskriti University):** Conceptualized, built, and deployed full-stack software prototype within a continuous 24-hour development sprint.

EDUCATION & CERTIFICATIONS

Sanskriti University — Mathura, Uttar Pradesh, India
Bachelor of Technology (B.Tech) in Computer Science & Engineering

- **Microsoft Applied Skills:** Secure Storage for Azure Files & Azure Blob Storage (Credential ID: C9B46A1CC05EDBF1)
- **Microsoft Applied Skills:** Create & Manage Canvas Apps with Power Apps (Credential ID: 13500F550D7B795B)
- **EF SET English Certificate:** C1 Advanced (Score 68/100, C2 Proficient in Reading & Listening)
- **C Language Certification:** KKCC Info Systems (Grade A)
